

Excluded Drugs List Medications

Your benefit plan does not cover all medications. Your benefit plan may exclude coverage for medications with one or more principal ingredients that are already available in greater/lesser strengths and/or combinations. Your plan may also exclude medications that only modify the dosage form (tablet, capsule, liquid, suspension, extended release, tamper resistant) for a medication that is already available in a common dosage form.

Coverage for these EDL medications is only available if your plan opts out of this list. The only plans that may choose to provide coverage are large employer plans with an open benefit design. Most plans do not provide coverage. If your plan does not cover these medications and you use them, you will have to pay the full cost of the medication. BCBSAZ may update and add to this list at any time.

For each excluded medication, we have also provided examples of alternative options. Any alternatives are subject to normal plan requirements including utilization management and medical necessity. Alternatives are also subject to member cost share requirements such as copayments or coinsurance. Some alternatives may not be covered due to other plan limitations (i.e., because the alternative is available over the counter). If you are currently taking, or have been prescribed, one of these non-covered medications, talk to your prescriber about whether one of the alternatives would work for you.

Be sure to review the *Pharmacy Benefit* section for benefit-specific exclusions and *What is Not Covered* in your benefit book for general exclusions and limitations that apply to all benefits.

To check coverage and copay information for a medication under your plan, visit azblue.com and log into MyBlue. If you do not have access to the website, call the Pharmacy Benefits number on the back of your member ID card.
